

Good afternoon everyone. It's my great honor to have such an interview. My name YanLei. I come from XiangTan University and I'm majoring in Information and Computing Science.

In the past 3 years, I spend most of my time on study. My GPA is among the top 2 in my major. I passed CTE 6 and have a nice GRE score.

At present, I have acquired a basic knowledge of my major, which have laid a solid foundation for my future study and research.

Besides, I have also join in Scientific Research Activity and won some prizes.

For example, I won first prize of National Mathematical Modeling Contest in Hunan province, got first prize scholarship, merit student, excellent student cadre and so on.

If I get the chance to enter SUSTech and have a further study at the Department of Mathematics, which I have desired for a long time, I will concentrate on the study and research in statistical learning. First I will spare no effort to learn the theoretical knowledge in order to build a solid base for my future work; second I would like to do some practical work with the help of the supervisor and classmates. And through this, I can get something that cannot be acquired from the textbooks. And if possible, I want to go on with my study for doctorate degree,

Thank you very much for your attention!
